

The ideal SaaS solution that meets all your needs

For standard applications, we offer specialized SaaS modules that are preconfigured for your specific use case.

Mondas PV

Monitoring and optimization of PV portfolios

Mondas BESS

Solution for your battery storage monitoring co-located or stand-alone

Mondas Heat

Monitoring and analysis of heat networks and energy centres, including regulatory-compliant customer energy portal module

Mondas Facility

Energy monitoring for properties

Mondas Core is also suitable for monitoring and optimizing CHP plants, wind power and biogas plants, as well as hydrogen production facilities.

Can't find your use case?
Let's discuss!

More than 5,000 energy assets are already monitored through the Mondas data platform.

Benefit from our experience!

We are here to assist you!

Mondas Core

Your ideal SaaS solution for:

- Utility companies
- Industrial and commercial operations
- Heat network operators
- Real estate and property managers
- Energy planners and maintenance companies
- Energy cooperatives and contractors

Mondas Core

Monitor complex energy systems with Mondas Core – all on one universal data platform!

WEATHER DATA

ELECTRICITY PRICES

Mondas Core – data analytics for the new energy era

Mondas Core is an intelligent SaaS solution designed to monitor and optimize interconnected energy systems.

Ideal for utility companies, industry, heat network operators and property management companies with complex, renewable energy supply systems and sector coupling.

Mondas Core boosts energy efficiency across your plants while drastically reducing the need for staff involvement in operation management and troubleshooting.

This leads to reduced maintenance and operating costs, along with a smaller ecological footprint.

Mondas Core provides an at-a-glance overview of all your plants.

Key features

Mondas Core's high-performance software architecture offers comprehensive features to efficiently monitor your entire energy plant portfolio:

- Automated data validation checks
- Comprehensive analytic tool (including algorithm library)
- Evaluations based on machine learning
- Configurable error reports and notifications
- Intelligent alarm tickets
- Accurate error diagnostics
- Included graphic analytic tool to configure specific evaluations and rules
- Maximum scalability and data connectivity

Key benefits

- Complete data transparency for your energy plants, portfolios and energy systems
- Intelligent software architecture including machine learning algorithms
- All energy systems and plants on one data analytics platform
- Up to 15% lower operating and maintenance costs
- Climate protection without investment costs
- Data stored and managed only in certified data centers in Germany
